

Too complex (high-order) interactions usually represent non-generalizable interaction patterns.

	Positive interactions	Negative interactions
Number	29	31
Sum of interaction effects	48.981	-47.926

model output: 2.19

Representing unreliable inference patterns consisting of background patches.

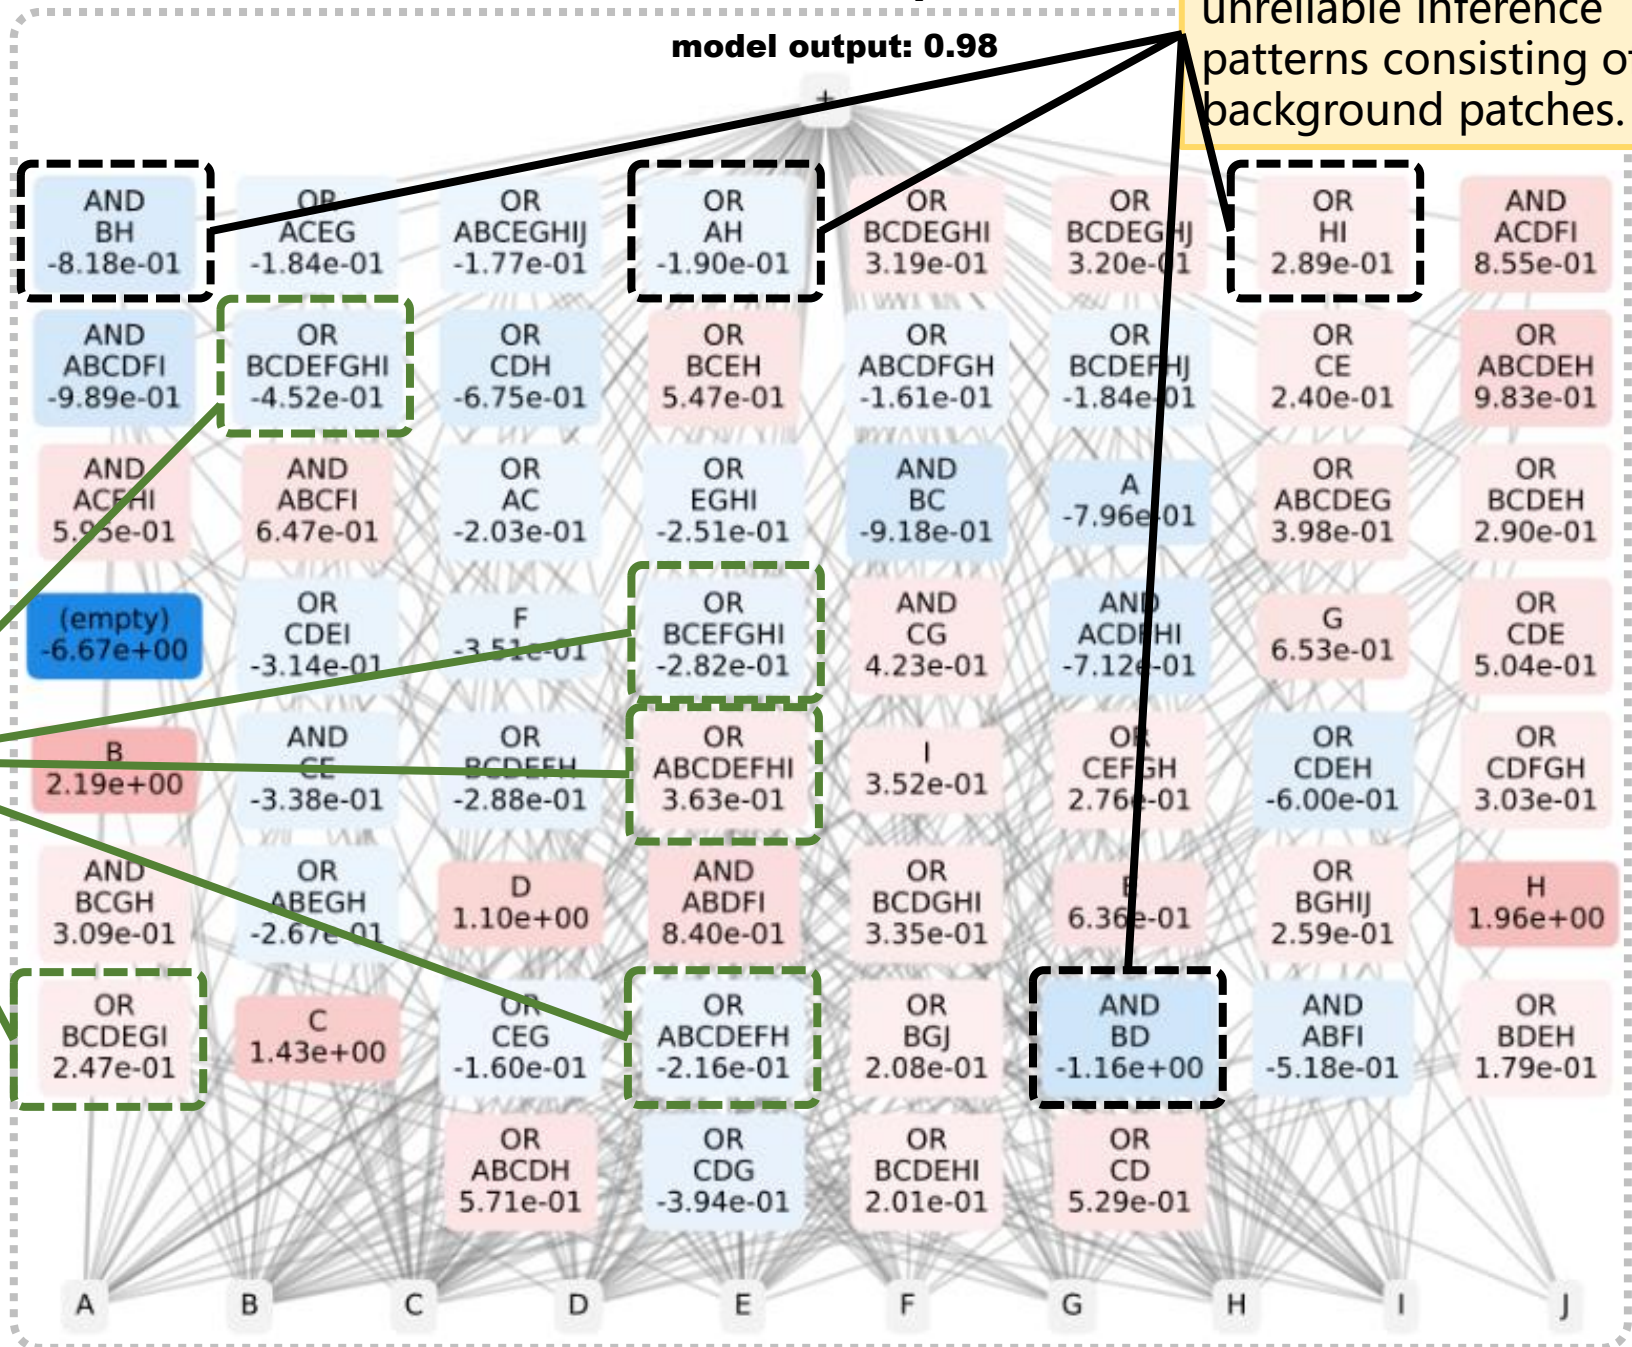

Too complex (high-order) interactions usually represent non-generalizable interaction patterns.

	Positive interactions	Negative interactions
Number	33	27
Sum of interaction effects	19.361	-17.224

model output: 0.98

Representing unreliable inference patterns consisting of background patches.

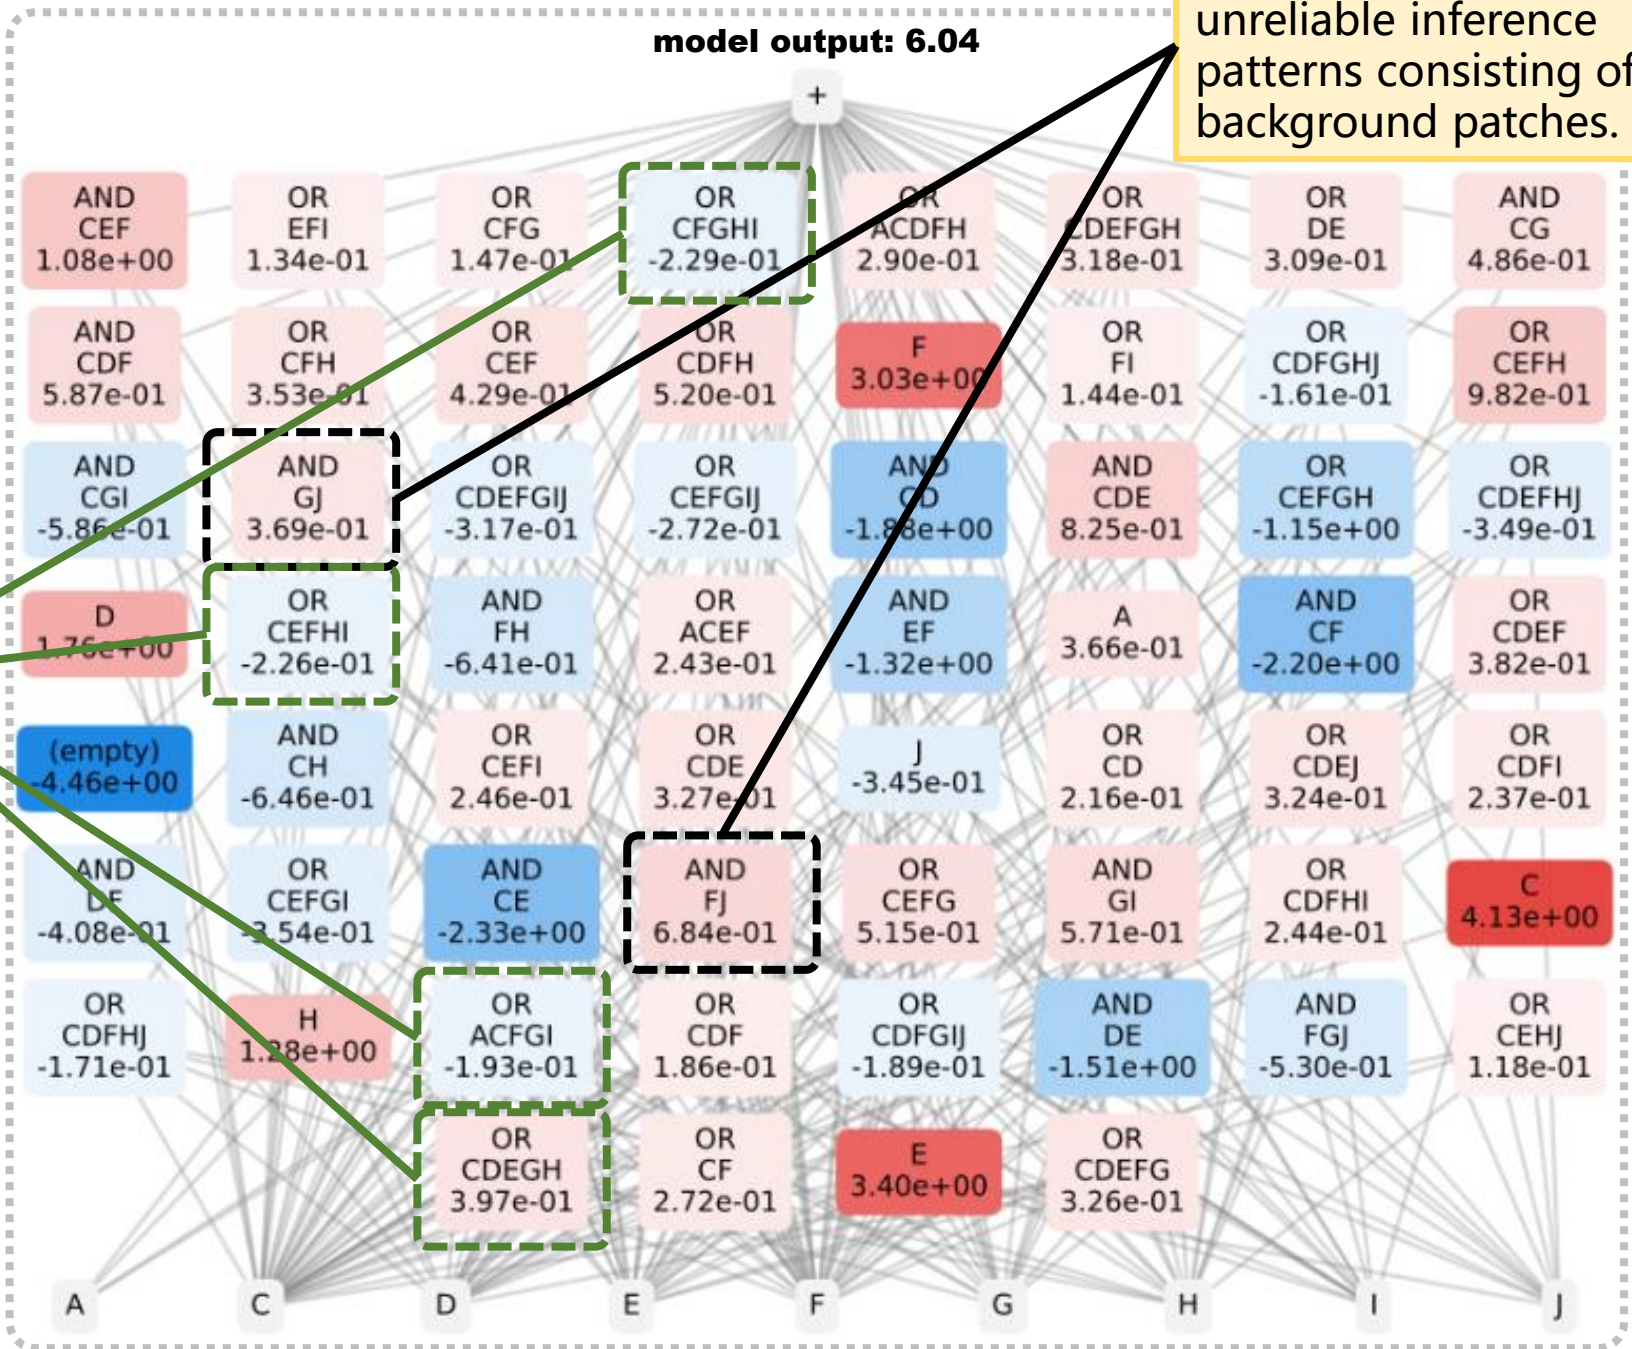

Too complex (high-order) interactions usually represent non-generalizable interaction patterns.

	Positive interactions	Negative interactions
Number	37	23
Sum of interaction effects	26.227	-21.467

model output: 6.04

Representing unreliable inference patterns consisting of background patches.
